

Polymer LGP Track Pads

NEW 1300mm wide Offset Polymer Track Pads to fit 13 to 15 tonne excavators.

No modifications are required to the track frame. Suitable for 171 to 175mm pitch track chains.

Track pads bolt directly to the track chains, bolts, nuts & washers supplied with pads.

The track pad bolt holes can be offset between 410 and 500mm to the inside depending on the clearance available on the excavator make/model.

The new improved overlap design is more robust and provides better flotation and improved traction while maintaining minimal ground disturbance.

Pads weigh only 11.8Kg each, you can achieve a ground pressure of 2.4 psi on a standard excavator.

Ideal for **Peatland Restoration works.** Part Number: **NY1300-171**

Hitachi 130 LCN-7 with track pad offset 470-830mm
