

Be Septic Smart!

Helpful Hints

Do not put the following in your septic:

- Toilet bowl cleaners
- Caustic drain openers
- Photographic or art chemicals
- Sanitary napkins/tampons
- Kitchen food wastes
- Fats
- Paints
- Gasoline
- Condoms
- Diapers
- Grease
- Solvents
- Oil
- Medication
- Thinners
- Laundry bleaches
- Nail polish remover
- Weed and insect killers
- Cigarette butts
- Paper towels

- Septic tanks should be pumped every 2 to 3 years and cottage septic tanks every 5 years.
- When purchasing a new home it is a good idea to get a visual inspection done on the septic
- Use phosphate-free soaps and detergents
- Use vinegar to clean the toilet, hydrogen peroxide as a bleach alternative, and use 1-ply toilet paper
- Use low-flow shower heads and toilets
- Don't direct excess water into your septic. Backwash water softener and sump pump discharge should all go into leaching pits.
- Keep the leaching bed area grassed and free of trees, vehicles, asphalt, brick, patio stones, automatic lawn sprinklers, swimming pools and regular foot traffic

We pump residential and commercial holding tanks and septic tanks, and offer portable outdoor facilities!
