

## Manitoba Conservation Trust Supports AMCP in Milestone Year

We are thrilled to announce that the Manitoba Conservation Trust is once again championing the AMCP Community Pasture rangelands with a grant of up to \$275,000!

Since 2019, the Manitoba Conservation Trust has been central to supporting AMCP deliver projects that benefit the health of the Community Pasture rangelands and, in turn, the livestock producers who bring cattle to the pastures every year. The Conservation Trust supports on-the-ground conservation projects that deliver improvements to our environment, including water quality, biodiversity, and wildlife habitat.

2024 marks a continuation of the Trust's commitment to AMCP's environmental stewardship. Grant funds are being directed towards projects that improve grazing management: enhanced water systems, livestock crossings, fencing, and brush management controls. These investments support the long-term sustainability of the Pastures, helping to support biodiversity, water quality, and wildlife habitat. Patrons benefit directly with better forage supplies for livestock and more reliable grazing services during drought.

As AMCP celebrates a decade of growth and success, we remain dedicated to our mission of balancing high-quality grazing with the sustainable rangeland stewardship. Here's to nurturing our lands, the livestock, and our legacy for many more years to come!

Past Trust funding has supported new cross fencing (above), water enhancements that improve reliability (above right) and brush clearing to maintain grasslands (right).

The Conservation and GROW Trusts are Manitoba Climate and Green Plan Initiatives, administered by the Manitoba Habitat Conservancy. Trust funds provide new opportunities to improve wildlife, water, and soil conservation across the province and connect people to nature.
