

FAQs

Q. How long do the treatments take and are they safe?

A. Cellulite treatments take around 20-60 minutes, depending on the size of area being treated. These treatments are non-invasive, safe and pain-free! There is no downtime associated with the treatments, so you are able to resume your regular activities immediately following treatment.

Q. When will I see results?

A. Following the very first treatment you will see an improvement in your skin. There will be a decrease in cellulite and your skin will feel firmer and tighter. However, to achieve optimal long-term results, a series of treatments is recommended.

Q. I've tried everything to get rid of cellulite. Why does the SharpLight cellulite treatment work?

A. SharpLight's Radio frequency technologies have been clinically proven to reduce unwanted cellulite. Unlike gels or creams, the treatment structurally changes the skin. It reduces fat deposits and the fibers- the two factors that cause cellulite.

Q. Are there any side effects?

A. You might experience temporary redness in the treatment area which should dissipate within a few hours.

Why should you choose cellulite reduction treatment with SharpLight?

- ▶ Effective for long-term reduction of cellulite
- ▶ Visible results from the first treatment
- ▶ Comfortable and pain free treatment
- ▶ Safe and completely non-invasive
- ▶ Suitable for all skin types
- ▶ No downtime

What our Practitioners are Saying:

Dr. Rafael D. Gottenger
M.D., Plastic Surgeon

“SharpLight's hand pieces come with a larger treatment spot size, which helps reduce treatment time without a decrease in effectiveness. The ability to combine treatments has led to optimal patient results.”

Cellulite

Don't let cellulite stop you from doing what you love

Cellulite treatments using Radio frequency technology

To effectively treat all degrees of cellulite, SharpLight's treatment uses powerful RF that dissolves the cellulite with a fast, easy, and completely pain-free treatment.

Eliminate Cellulite Today!

Almost all women develop cellulite, but this doesn't mean you need to live with it. If the cellulite on your body is bothering you, you can reduce it in no time, and go back to wearing your favorite swimsuit!

Cellulite affects almost 90% of women at some point during their lives. It appears regardless of your body weight, and it usually affects women who are otherwise slender and fit. Cellulite is often genetic and worsens with age.

How does Cellulite Reduction work?

During treatment, your aesthetic practitioner will use Radio frequency that targets water in the fat cells. These fat cells are usually enlarged, and are the reason behind the dimpling of the skin. The endothermic heat produced by this advanced radio frequency treatment, significantly reduces the size of fat cells, which contributes to a smoother skin appearance. The heat also breaks the extracellular fibers that cause the dimpling of the skin. As a result, the skin is restored to its original form.

Seeing is Believing

What our Patients are Saying:

(((I was always conscious of my thighs due to my cellulite. But after getting the body contouring treatment, it helped to diminish the cellulite and tighten my skin. I can now wear short shorts and show off my legs!)))
