

Here are just a handful of benefits you'll experience when switching to our patented industrial Bow Tie filters for your company's filtration needs:

- Fewer change-outs
- Less defects
- More consistent air flow
- Better booth balancing
- Less waste
- A cleaner working environment
- More production
- Fewer stack cleanings
- Energy savings
- Faster change-outs
- Happier employees
- Cost savings

How They Work

We incorporated directional air flow into the filters, which allows us to control where and how material being sprayed will gather. This has also allowed us to create a clean surface within the filter, which will allow the filter to continually breathe. Thus, creating the longest lasting exhaust filter in existence.

Our patented BowTie filters are available in the following sizes :

- 20" x 20"
- 24" x 24"
- 20" x 25" horizontal
- 20" x 25" vertical

All of our filters are almost 20" deep with an 11" deep option for booths that don't have as much space behind.
