

FAQs

Q. How does the VermaDerm™ technology work?

A. SharpLight's VermaDerm solution uses Infrared technology. The Infrared waves penetrate deep within the dermis and stimulates the production of collagen and elastin. The VermaDerm handpiece has a built in cooling component that cools the top layer of the skin during the treatment process. This protects the epidermis from any damage.

Q. How does the Fractional laser work?

A. Contrary to traditional lasers that ablate large surfaces of the skin, the Fractional laser only ablates a 'fraction' of the skin which enables the skin to heal much faster. The micro-ablation and the thermal induced healing that follows, stimulates the production of new collagen. The treatment isn't painful, but patients can experience a certain level of discomfort.

Q. How does the Radio frequency technology work?

A. Radio frequency is effective since it heats tissue based on its level of electrical resistance. SharpLight uses a multi - polar Radio frequency that targets the dermal layer and gently heats the tissue. As a result, new collagen is produced and the collagen fibers contract and firm.

Q. How long does each treatment take?

A. The typical regimen is 6-12 treatment sessions, spaced 2-6 weeks apart depending on the exact protocol used. Although treatment time averages at 30 minutes, session time will change depending on the area being treated.

Why should you choose skin firming with SharpLight

- ▶ Effective on a wide variety of skin types
- ▶ Non-invasive, safe and reliable
- ▶ Minimal number of treatments
- ▶ Immediate, long lasting results
- ▶ Reduces wrinkles, pigmentation and sun damage

What our Practitioners are Saying:

Dr. Deepak Gelot
M.D.

SharpLight's technology has been remarkable in my practice. Its use of Skin Firming treatments combine energies in a safe and effective way, to provide exceptional results. My practice values SharpLight's remarkable customer service and marketing team, making the use of their technology highly pleasing.

Skin Firming

Start loving your skin more every day

Skin firming using multiple technologies

To achieve the best skin results, SharpLight's treatment uses up to 3 different technologies. The combined technologies form a synergistic effect that optimally firms the skin and restores its lost tone.

Turn back time and enjoy firmer and more supple skin

You can't stop aging, but you can definitely age gracefully. There are many factors that cause our skin to sag - gravity, sun damage, pollution and more. The key reason however is that with age, the body produces less collagen and elastin - proteins necessary to maintain the skin's firmness. The good news is that SharpLight's treatments trigger the body to produce new collagen and elastin and in just a single treatment, your skin will look and feel firmer than ever!

How does it work?

Each technology - VermaDerm™, IR, Radio frequency and Fractional Laser - treat the skin differently, but the common denominator of the technologies is that they all stimulate the body to produce new collagen and elastin. These proteins help the skin restore its lost tone resulting in long-lasting skin firming. In addition, the heat generated by the technologies causes the collagen fibers to contract, which yields immediate skin tightening and firming.

What our Patients are Saying:

“SharpLight's infrared treatment gave me the opportunity to regain my youthfulness without any downtime. The treatment resulted in smoother, tighter and a more contoured appearance.”

Kelly Trechburg - SharpLight Patient

“I had the treatment done over my lunch break and immediately noticed a lifting. Even over several months, the results continued to further improve. The treatment was comfortable and virtually pain-free!”

Brian Macgurr - SharpLight Patient
