Figure 1 Strategy Main Menu

Initializing Your Voicemail Box

Note:

When you log on to the Strategy Voice Processing system for the very first time, you hear a tutorial that walks you through the four steps below.

If you do not complete the tutorial before hanging up, Strategy saves any completed portion (e.g., your name recording) and restarts where you left off the next time you log on to your mailbox. Once the Strategy tutorial is completed successfully, it cannot be replayed.

Please have your personal greeting written out and ready to record as well as a new Security Code chosen (Security Codes can be between 3 – 16 digits). Please ensure your new code cannot be easily guessed.

1. Log-on

Pick up your handset and Press '600', wait for the voicemail to answer. Enter your default Security Code (Your Extension number is the default security code – e.g., Your Ext is 101, your default Security Code is 101)

2. Record Your Name

Record your First and Last name. This recording will be heard when callers access the company directory.

3. Record Your Personal Greeting

Your personal greeting will play when a call is answered by your voicemail box while you are away from your phone.

Note: When recording your greeting you may include the following statement to allow callers to replay your greeting (especially if you have a phone number included in your greeting.)

“To hear this greeting again, press 521”

Example: “You’ve reached John Smith, I am currently away from the office. If your call is of an urgent nature, please call me directly at 250.123.0000. To hear this greeting again, press 521”

4. Change the default Security Code

Enter a new Security Code, the system will likely request you to enter it twice to ensure it is correct.

Message Waiting

Access Voicemail Box when the Msg LED is Lit

1. Press Msg or , then lift the handset. Your telephone will ring the extension or voicemail device that sent the indication. The LED will flash red.
2. Follow the prompts.
