## LET THERE BE LIGHT

Since the sixties, there have been little, if any changes to the appearance and function of basement windows ... Until now! Introducing, to this market, the Boman Kemp Basement Window System, bringing natural light, ventilation and transformation to the downstairs living area. Additionally, the system provides all the necessary egress requirements outlined by the Canadian Building Code for basement bedrooms. To appreciate the improvements and beauty of this system and to answer any, and all your questions, simply visit their website; [www.bomankemp-canada.com](http://www.bomankemp-canada.com)

We are presently offering a **special promotion** for innovative builders who choose this system for a show home model. Our stocking size widow system #4040, the 48" x 48" size, will be provided at no charge to the show home build, if this system is specified as **a standard for that model (not an option)**.

Our Sales Representatives will be happy to discuss your requirements and to show you a physical display of the product. We will also provide technical support and training on site for your cribbers before installation. One day, all your house plans will include basement windows from Boman Kemp, provided by Davidson Enman Lumber.
