

Polymer LGP Track Pads

5 to 6 Tonne class **NY series track pad**

NEW 900mm wide Offset Polymer Track Pads to fit 135mm pitch track chains.

Track pads bolt directly to the track chains, bolts, nuts & washers supplied with pads.

The bolt holes are drilled to suit your excavator. They can be offset between 290mm and 370mm to the inside and will fit most standard 5 to 6 tonne excavators without modification to the track frame.

The new improved pad overlap design provides better flotation and improved traction.

Pads weigh only 5Kg each, so you can achieve a ground pressure of 2 psi.

Ideal for peatland restoration works.

Part Number: NY900-135
